[0012] FIG. 1 is the initial set-up menu.

[0013] FIG. 2 show intruder entry and the workings of the invention as related to the method of connectivity between the homebased computer and a real-time capable wireless cellular device.

[0014] FIG. 3 shows executed call to a hand-held, real-time wireless device.

[0015] FIG. 4 shows how unauthorized entry has fully engaged the user's real-time hand-held device with two-way real-time viewing of burglar being confronted by homeowner from a remote site.

[0016] FIG. 5 shows burglars in real-time on viewer.

[0017] To sum up FIG. 1 through 5, unauthorized entry inside the home alerts the homebased computer security system, which, in turn, triggers the invention's dial mechanism. Upon full execution of the call, the invention establishes the connection between user's computerized security surveillance system and his/her real-time cellular device, giving user tracking, voice and view control via the hand-held device.
